

RADIX CORPORATION INTRODUCES THE FW900, AN ULTRA-RUGGED HANDHELD COMPUTER

Salt Lake City, Utah, USA – March 30, 2006 – Radix Corporation, an established world leader in the mobile computing market, is pleased to announce the addition of FW900 to its line of ultra-rugged handheld computers. This 11th generation handheld is built on our vast experience in the industry and the latest technological advances. The quality of our product speaks for itself – some of our customers have been using as many as 5 generations of our handhelds. The new FW900 is designed to stand up to the harshest and most extreme environments, while still delivering excellent performance and reliability.

“We are very excited about our new FW900 handheld computer,” said Jim Benson, Executive Vice President, Radix Corporation. “Based on the popular Windows[®] CE .NET and high performance Intel XScale[®] 400 MHz processor, the FW900 offers several wireless connection options including Bluetooth[®] and Wi-Fi[®].”

Certified IP67 and MIL-STD-810F, this product is also engineered to perform in extreme conditions. It is sealed to keep out rain and dust and can endure multiple 5 foot drops onto concrete and withstand severe high and low temperatures.

Weighing only 25 ounces, this handheld features a 3.5-inch TFT industrial grade color touch screen with LED backlighting for indoor and outdoor use. In order to meet your application needs, Radix offers custom raised or flat keyboard options with separate alpha-numerics. Our field-replaceable lithium-ion battery pack charges in 3 hours and provides a full-shift operating time for the convenience of today’s field workers.

Radix also offers a wide range of peripherals for the FW900 handheld including an integrated 3" thermal printer for printing receipts, bills, tickets and labels; an integrated imager that reads 1D linear and 2D stacked/matrix barcodes, OCR fonts and postal codes; and a laser scanner ideal for reading complex barcodes and taking pictures. This modular design makes the FW900 a perfect handheld for a variety of applications such as utility meter reading, parking enforcement, route accounting, transportation, inspection and maintenance.

About Radix Corporation

Radix Corporation, an established world leader in the mobile computing market, designs and manufactures some of the most ultra-rugged and easy to use handheld computers and portable printers in the world today.
